Summary

Full Stack Developer with 2.5+ years of experience building Angular UI component libraries and Java/Spring Boot back-end services for production healthcare data systems. Strong grounding in object-oriented design, TypeScript, and Angular Material/standalone-component architecture, with hands-on experience in UI development, unit testing (Jasmine/Karma, JUnit), and Java memory/performance optimization. Comfortable owning a module end-to-end, from UX-aware UI implementation through backend design and rollout.

Experience

Full Stack Developer

Aug 2024 – Present

UST HealthProof

Chennai, India

- Build and maintain **healthproof-extended-ui (HPX)**, a shared **Angular** component library (standalone components, **Angular Material**) consumed by 3 products company-wide, helping standardize UI/UX and coding practices across teams.
- Enforce strict SCSS/stylelint conventions (BEM, kebab-case modifiers) across Angular components to keep the UI layer consistent and maintainable; own end-to-end delivery of backend workflows across 4 production modules – from requirements and system design to rollout – using **Spring Boot / Spring Batch**.
- Designed a team-wide code quality pipeline (ESLint, SonarQube, Husky, Spotless, Checkstyle) adopted across 3 client teams; write **Jasmine/Karma** tests for Angular components alongside JUnit/Mockito/Testcontainers, raising coverage to 100% on Angular and Java codebases.
- Architected a decoupled integration between an internal module and an external company product, enabling independent execution and deployment; two-time recipient of UST's Shining Star Award.
- Independently diagnosed and resolved performance issues – N+1 queries, missing indexes, **Java memory leaks and GC pressure** – across 6 Java services, applying core Java memory-management principles.

Junior Full Stack Developer

Aug 2023 – Jan 2024

STEAM Troops Innovation Labs

India

- Built LMS features – authentication, course management, content delivery – using **Next.js**, PostgreSQL, and NextAuth; integrated REST APIs with backend database workflows.

Next.js Intern

Jan 2024 – Feb 2024

Mathync

Remote

- Built e-commerce frontend features in Next.js, integrated Strapi CMS APIs, and deployed applications on Vercel.

Projects

Zentro (GitHub)

Apr 2026 – Present

TypeScript, tRPC, Next.js, Drizzle, PostgreSQL, Docker

- Architecting a multi-tenant collaboration platform with workspace isolation, RBAC, and task management; designed organization/workspace/membership/permission models with strong OOP-driven domain modelling.

Life OS

In Progress

Angular, Spring Boot, Kafka, PostgreSQL, React Native, Tauri

- Building the web frontend in **Angular** (standalone components, signals, RxJS) with PrimeNG and Tailwind CSS v4, backed by an 8-service event-driven Spring Boot/Kafka microservices architecture – auth, vault, job tracker, finance tracker – spanning web, mobile (React Native), and desktop (Tauri) clients.

Next Kit (GitHub, npm, docs, site)

Sep 2024 – Apr 2025

TypeScript, Node.js, CLI Tooling

- Built and published a configurable CLI to npm scaffolding production-ready Next.js apps across 8 categories (auth, ORM, database, UI library, email, payments, analytics, API layer – 20+ pluggable integrations) with cross-package-manager support.

Technical Skills

Frontend & UX: Angular (standalone components, Angular Material), TypeScript, JavaScript, HTML5, CSS3, SCSS, Tailwind CSS, React, Next.js

Testing: Jasmine, Karma, JUnit, Mockito, MockMvc, Testcontainers, Unit & Integration Testing

Backend: Java (OOP, Memory Management, Collections, Concurrency, Streams), Spring Boot, Spring MVC, Spring Security, Spring Batch, Node.js, Express.js, REST APIs, tRPC, Kafka, Microservices, Event-Driven Architecture

Data: PostgreSQL, MySQL, MongoDB, Redis, JPA, Hibernate, JDBC, Prisma, Drizzle

Cloud / Tools: AWS (S3, CloudWatch), Docker, CI/CD, Vercel, Git, GitHub, SonarQube, Husky, Maven, Swagger/OpenAPI

Languages Spoken: English (Fluent), German (A1, pursuing A2)

Education

Rajalakshmi Engineering College

2020 – 2024

B.Tech, Computer Science and Business Systems – GPA: 7.98

India

Achievements

- Project Director – Web Technologies, Designers Consortium; conducted FrameX (800+ participants, 2022–2023) and led the technical symposium end-to-end.
- Secured 3rd place in a Designers Consortium hackathon; participated in Smart India Hackathon (SIH) 2023.
