Summary

Full Stack Engineer with 2.5+ years of experience in Java, Spring Boot, Spring Batch, TypeScript, React, and Next.js, building REST APIs and backend architecture for production healthcare data systems. Experienced in database design, performance optimization, and owning modules end-to-end – from system design through rollout – plus self-directed platform-scale side projects.

Experience

Full Stack Developer

Aug 2024 – Present

UST HealthProof

Chennai, India

- Own end-to-end delivery of backend workflows across 4 production modules – from requirements and system design to rollout and production support – building Spring Boot / Spring Batch services that process, validate, and persist transactional healthcare data.
- Architected a decoupled integration between an internal module and an external company product, enabling independent execution and deployment; two-time recipient of UST's Shining Star Award, nominated by leads, architects, and product owners.
- Led a module as primary developer, owning UI and backend delivery; built a validation engine comparing source/target datasets for availability and attribute-level consistency, and removed dead code while refactoring legacy components to improve maintainability.
- Owned a separate module end-to-end (database design, backend architecture, and frontend implementation); independently diagnosed and resolved codebase-wide performance issues – N+1 queries, missing indexes, unbatched external calls, memory leaks – across 6 Java services.
- Designed and rolled out a team-wide code quality pipeline (ESLint, SonarQube quality gates, Husky pre-commit/pre-push hooks, Spotless, Checkstyle) adopted across 3 client implementation teams; wrote unit and integration tests (JUnit, Mockito, MockMvc, Testcontainers) across all 4 modules, raising coverage to 100% on Java services and Angular codebases.
- Contribute to an internal UI component library (6–7 shared components) adopted across 3 products company-wide, helping standardize coding practices across teams.

Junior Full Stack Developer

Aug 2023 – Jan 2024

STEAM Troops Innovation Labs

India

- Built LMS features – authentication, course management, and content delivery – using Next.js, PostgreSQL, and NextAuth; designed and integrated REST APIs with backend database workflows.

Next.js Intern

Jan 2024 – Feb 2024

Matlync

Remote

- Built e-commerce frontend features in Next.js, integrated Strapi CMS APIs, and deployed applications on Vercel.

Projects

Zentro (GitHub) | TypeScript, tRPC, Next.js, Drizzle, PostgreSQL, Docker

Apr 2026 – Present

- Architecting a multi-tenant collaboration platform with workspace isolation, RBAC, task management, and real-time collaboration; designed organization/workspace/membership/permission models for scalable multi-tenant access control.

Next Kit (npm, GitHub, docs) | TypeScript, Node.js, CLI Tooling

Sep 2024 – Apr 2025

- Built and published a configurable CLI to npm that scaffolds production-ready Next.js apps across 8 categories – auth, ORM, database, UI library, email, payments, analytics, and API layer (20+ pluggable integrations total) – with cross-package-manager support (npm, pnpm, yarn, bun).

Life OS | Java, Spring Boot, Kafka, PostgreSQL, Angular, React Native, Tauri

In Progress

- Building a modular personal life-management platform on an 8-service, event-driven microservices architecture (Spring Boot, Kafka) – including auth, vault, job tracker, and finance tracker – with Claude API-powered resume tailoring and job-application automation, spanning web, mobile, and desktop clients.

Education

Rajalakshmi Engineering College

2020 – 2024

B.Tech, Computer Science and Business Systems – GPA: 7.98

India

Technical Skills

Languages: Java, TypeScript, JavaScript, SQL

Backend: Spring Boot, Spring MVC, Spring Security, Spring Batch, Node.js, Express.js, REST APIs, tRPC, Kafka, Microservices, Event-Driven Architecture

Frontend: React, Next.js, Tailwind CSS

Architecture: System Design, Backend Architecture, RBAC, Multi-Tenancy, Database Design

Data: PostgreSQL, MySQL, MongoDB, Redis, JPA, Hibernate, JDBC, Prisma, Drizzle

Cloud / Tools: AWS (S3, CloudWatch), Docker, CI/CD, Vercel, Git, GitHub, SonarQube, Husky, Maven, Swagger/OpenAPI

Testing: JUnit, Mockito, MockMvc, Testcontainers, Unit Testing, Integration Testing

Languages Spoken: English (Fluent), German (A1, pursuing A2)

Achievements

- Project Director – Web Technologies, Designers Consortium; conducted **FrameX**, a UI development competition attracting 800+ participants (2022–2023), and led an entire technical symposium end-to-end – building the event website and managing logistics.
- Secured 3rd place in a competitive hackathon organized by the Designers Consortium.
- Participated in Smart India Hackathon (SIH) 2023.
